

PICS Climate Internship Program

The PICS Climate Internship Program supports projects that build knowledge, skills and experience for students while increasing the capacity for organizations across British Columbia to achieve their climate-related goals.

PICS is more likely to fund projects that aim to achieve two or more of the following:

- provide direct value or benefit to communities (communities can include groups living in common areas and/or groups with common interests);
- include and/or explore the connections between mitigation and adaptation;
- are rooted in principles of climate justice and reconciliation; and/or
- enhance integration of climate action in governance, policy and/or professional practice.
